07 20 00 THERMAL PROTECTION

07 21 00 Thermal Insulation
Roof slope should be designed for positive drainage for all roof areas. This can be accomplished by sloping the roof deck during construction, the application of lightweight concrete, or by using tapered roof panels. The preferred taper system is composed of polyisocyanurate insulation board panels placed and stacked in such a way that the top panel is tapered to form the desired roof slope shape. The desired slope is ¾ inch per foot. In some cases where existing buildings are being designed for re-roof, the limited uses of 1/8 inch per foot may be allowed if it encroaches on windows or unduly changes the parapet or other structures.

INCLUDE IN CONSTRUCTION DOCUMENTS

EXECUTION

Rigid insulation shall be properly fit, joints sealed and bonded to wall, allowing the insulation to act as a single, uninterrupted layer of insulation. The preferred roofing insulation material is polyisocyanurate. The use of expanded polystyrene is discouraged.
07 24 16 Polymer-Modified Exterior Insulation and Finish System
07 24 19 Water-Drainage Exterior Insulation and Finish System

07 25 00 WEATHERBARRIERS

INCLUDE IN CONSTRUCTION DOCUMENTS

WARRANTY

Special Warranty

1. Weather barrier manufacturer’s warranty for weather barrier for a period of ten years from date of Substantial Completion.
2. Approval by weather barrier manufacturer for warranty is required prior to assembly installation.

CONSULTANT DESIGN GUIDELINE

This is our preferred roofing system.

SUBMITTALS

LEED Submittals:
1. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
2. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.

CONSULTANT DESIGN GUIDELINE

Membrane Roofing. All membrane roofing shall be mop applied modified bitumen type with a twenty-year manufacturers’ warranty. The membrane roofing system shall consist of all materials and methods
as recommended by roofing manufacturer and shall include a designated base sheet and a cap sheet with factory installed roofing granules. Base sheet and cap sheet shall be as determined by roofing manufacturer to achieve the warranty and reflectance indicated above.

The membrane roofing and all associated roofing elements shall be installed by a qualified roofing contractor who has been certified by the manufacture to install the particular roofing system. The finished roof system shall have a two-year installers’ warranty in addition to the twenty-year manufacturers’ warranty.

Torch applied membrane roofing systems may be allowed under special conditions. Check with the Facilities Management Construction Coordinator for approval.

INCLUDE IN CONSTRUCTION DOCUMENTS

Quality assurance. Installers must have completed three projects equal in size and scope and be an approved applicator.

Completion. The roof will not be considered over 90% complete until satisfactory warranty has been received and approved by the architect/engineer.

CONSULTANT DESIGN GUIDELINE
This system may be used if special consideration is needed:

1.4 PERFORMANCE REQUIREMENTS

A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

C. FM Approvals Listing: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.

   1. Fire/Windstorm Classification: Class 1A-90.
   2. Hail Resistance: SH.

D. Energy Performance: Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

INCLUDE IN CONSTRUCTION DOCUMENTS

1.5 SUBMITTALS

B. LEED Submittals:

   1. Product Data for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   2. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is FM Approvals approved for membrane roofing system identical to that used for this Project. Provide primary products, including each component of the single ply membrane system and related flashings produced by a single manufacturer, which has produced the specified membrane type and roofing system successfully for not less than 15 years. Provide secondary products, including insulation, coated metal flashings, fasteners, and other accessories, which are acceptable to the single ply membrane manufacturer for use with roofing system indicated.

   1. Manufacturer's Certification: PVC manufacturer is provide written certification the specified PVC membrane is within 2.0 mil thickness of the specified membrane thickness. ASTM D751 or D638 nominal thickness of +/- 10 percent will not be acceptable for measurement of membrane thickness.
1.9 WARRANTY

A. Roofing Manufacturer’s Warranty: Submit a written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in the roof and base flashings resulting from defects in materials or workmanship, and complying with the following:

1. Specified work shall be guaranteed by the Roofing Materials Manufacturer for a period of twenty (20) years with unlimited per square liability sum available starting from date of Substantial Completion or final acceptance (if later) by the Owner of the completed roofing system.
2. The warranty shall be issued and approved by the Materials Manufacturer. Surety company bonds are not acceptable. Submit one copy of the roof warranty on Manufacturer’s standard printed form to the Owner, via the Architect. Submit another copy to the Architect upon acceptance of the roof.
3. Specified work shall be inspected by a qualified representative of the Manufacturer during its installation and at final completion, for conformance to Manufacturer’s warranty program. A follow-up inspection shall be made by the Manufacturer sixty days (±) prior to expiration of Installer's two year warranty.

C. Installers Warranty: Installer's warranty is for a period of two (2) years, furnished upon completion of all work, as a condition to its acceptance, final payment and project close-out and shall comply with the following:

1. Installer’s warranty shall be issued on company's printed letterhead, agreeing to correct all leaks and defects in the roofing system to the satisfaction of the Owner and the manufacturer of the installed roof system.
2. During the two year warranty period, the Roofing Installer shall, upon notice from the Owner or Architect, respond promptly to determine the repair source of leaks or defects at no cost to the Owner.
3. Regardless of the cause of the leak or defect, the Owner and the Roofing Installer shall document and correspond as to the problem, location and corrective action needed or taken to prevent future similar occurrences.
4. For repairs or re-work of existing roofing, provide Installers Two-year Roof Guarantee, printed and signed on contractors letterhead.

2.3 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by PVC membrane roofing manufacturer, selected from manufacturer’s standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation.
B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.

C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

END OF SECTION 075419
Special Warranty on Finishes: Manufacturer’s standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within 20 years from date of Substantial Completion.
